

We're Here To Help You Create A More Sustainable World

Consumers are increasingly demanding more sustainable products. Companies now face the challenge of meeting this demand without sacrificing cost or quality. Green Dot serves designers, product developers and manufacturers by providing a full-line of more sustainable alternatives to petroleum-based plastics. We help companies make innovative products that perform better and last longer, with a full range of biobased, biocomposite, and biodegradable materials that are not just greener, they're better.

At Green Dot we're committed to educating designers and manufacturers about these new alternatives to petroleum-based plastics. So we've created a new learning center on our website at GreenDotPure.com. There you can find posts on the environmental benefits and physical attributes of our wide range of bioplastics and biocomposites along with processing and tooling tips, new applications and innovative products. We will also be publishing quarterly white papers providing a deeper dive to better understand material options, processing data and insights into consumer preferences. We hope that this information will inform and inspire.

We welcome your suggestions. If there's a topic that you would like us to cover, please let us know at info@greendot Holdings.com. You can also request a free consultation to discuss your specific needs. Just go to our website and tell us about your project and one of our plastics professionals will contact you to schedule an appointment.

We're here to help you create products that people will love. Working together we can create innovative products that allow consumers to contribute to a more sustainable world.

Creating a more sustainable plastic

Learn how we're meeting demand for more sustainable goods without sacrificing quality or cost.
